whether or not it would be worth my time, and all praised *Light and Shade* (Barron's Art Handbooks):

This book explains theory and instructs on techniques for creating shadows and the illusion of depth in charcoal and other monochrome media, as well as in color. Among the main subjects explored are light and shade in artworks throughout history, methods of creating the effect of brightness, highlighting, contrasting light and shade in chiaroscuro, and reproducing visual textures created by light. Barron's Art Handbooks are pocket-size reference volumes for students, artists, and art hobbyists. All have full-color illustrations throughout.
