**Norman D. Willis : Little Giant Encyclopedia: Logic Puzzles (Little Giant Encyclopedias)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Little Giant Encyclopedia: Logic Puzzles (Little Giant Encyclopedias):

Read on for further explanation, please... Please know that Norman David Willis was a genius puzzle writer, problem solver and the first to write "The Comparable Worth Study" used by businesses and governments around the world. His earlier books display his genius. So that you will understand, Mr. Willis was my father, and he was diagnosed with Alzheimer's disease long before this book was published. No and no, I was NOT asked to edit this book as I was asked to edit his earlier publications. He kept hidden from me the fact that he was still writing, and his publishers were not intelligent enough to catch any of his mistakes,

nor did they check for them. They are publishers, and want to turn out books, not readers who love to pour over logic puzzles. Norman D. Willis died with me, his youngest daughter, in November of 2009. What devastated him most in the last few years of his amazing life was knowing that he was losing his cognitive abilities. I am sorry that this book made it through the cracks. My father was a brilliant man and his earlier books are amazing. Many are no longer published, but have been translated into several languages and can be found as collectors items. Thank you for understanding, Carol Willis Simsak

Apparently this is just a reprint of this:

[http://www..com/gp/product/0806926899/ref=cm\\_cr\\_rev\\_prod\\_img](http://www..com/gp/product/0806926899/ref=cm_cr_rev_prod_img) Unfortunately, this was my first attempt at a logic puzzle book and I didn't know what to expect. I was stuck on the first puzzle and assumed I was bad at logic puzzles. The answers in the back of the book made no sense to me. Well, after reading everyone else's comments, it turns out this is just a horrible logic puzzle book that has been reprinted with a pretty cover.

Nice selection of puzzles. Problem is some have errors or have multiple solutions that are not noted. Better quality checks would have been useful. There's nothing more annoying than wasting time on a puzzle that's not tightly constructed.

Have fun while you expand your powers of deductive reasoning! Every one of these puzzles calls for conclusions based only on the information provided; the answers don't depend on previous knowledge, memory, wordplay, or deception—just a logical mind. Accept the alternatives that lead to the correct response and discard all faulty assumptions until you've arrived at the only possibility that makes sense. There are eight kinds of puzzles, and in most cases diagrams help organize your results. Here's one example: A supermarket theft has occurred. Someone took a fully loaded cart without paying for the groceries. One of the three suspects is guilty—but which one? The guilty party's statement is true; the other two are false. Who is guilty?
