I can't find any current series that has such a good combination of factsBy alexI collect this series because they have nostalgia value for me: we had them in my school library in the 1990's. But honestly, I can't find any current series that has such a good combination of facts, photos and diagrams and is presented as nicely. Some of the information is now outdated: we've learned more about some animals, population numbers have changed, et cetera, but I think they're still a good resource.

Introduces mammals which live and feed on the plains and savannahs, such as gazelles, tapirs, and kangaroos.
