Jeffrey Winterborne : Medical Marijuana / Cannabis Cultivation: Trees of Life at the University of London before purchasing it in order to gage whether or not it would be worth my time, and all praised Medical Marijuana / Cannabis Cultivation: Trees of Life at the University of London:

1 of 1 people found the following review helpful. best book for your money. period!!!By okI can't say enough good things about jeffrey winterborne. if you are reading this review, just buy it. worth your money 100 fold. years of experience and still learned something!! from a friend to a friend i recommend this book!1 of 2 people found the following review helpful. DVD NarrativeBy YescaThis book is basically two parts. The first half is a transcription of

the DVD documentary made at Un.of London on growing hydroponic herb. This portion is interesting with good info. If you are looking for a good grow guide though, this is not the book. It lacks many specifics and is more informative than instructive. And what specific info there is can be difficult to locate due to a poor index system. The second half is history, general info, and uses of medical marijuana. And lastly some classic literature on Cannabis intoxication. A good book for the Cannabis aficionado, well illustrated, informative, and entertaining stories. Not so good as a grow "bible". 1 of 1 people found the following review helpful. Master Gardener By David P. Smelser The author no doubt in my mind is an expert grower. The book has lots of photos taken from video but needs captions so you know exactly what they are trying to show.

Medical Marijuana Cannabis Cultivation represents an educational, in depth, up-to-date, indoor horticultural documentary book that covers all principles of indoor hydroponic horticulture, including an exposé on medical, industrial and spiritual applications of cannabis. This publication contains 650 images taken from six hours of broadcast quality footage with over 55,000 transcribed words, over 70,000 written words, multiple close-ups, pan shots, stills and generic footage of live cannabis; from grow room construction to hanging the buds. Medical Marijuana Cannabis Cultivation takes you on a journey, through seed germination, propagation, transplantation, vegetative cycles, pre flowering cycles, sexing, crop control, flowering cycles, pest management, fungal management, harvesting, manicuring, and drying. This publication examines, explores, dissects, and presents a fully comprehensive documentary with complete sections on propagation, hydroponic systems, nutrients, additives, oxygen, sexing, carbon dioxide enrichment, pH, biological pest control, fungi/disease, pruning/training, breeding, harvesting, equipment, grow rooms, medical applications, industrial applications, spiritual applications, and more. Presented in full photographic color. Medical Marijuana Cannabis Cultivation quite simply outclasses any other publication on the subject in terms of literal content, quantity, quality, and presentation. No other production can compete let alone compare.

About the Author Over twenty years ago Jeffrey Winterborne developed a very keen interest in rare ethnobotanical plants. This interest developed into a very strong hobby which dominated his life. Jeffrey explored many cultivation styles over the years finally settling on hydroponics which took over from all previous methods employed. After years of experience in both soil cultivation and hydroponic cultivation, in 1997 he opened a hydroponics and indoor horticultural grow shop in Guildford town centre, Surrey, U.K. to which to date, he still owns and runs. With over fifteen years of dealing with the general public, the trade and scientists, answering every type of imaginable and some unimaginable questions on the subject of hydroponics and indoor cultivation during this time frame, Jeffrey felt it was well overdue for a professional, well educated, and up-to-date U.K. grow book to be released.
